

Q2 Board Meeting

Date _____

Time _____

Attendees _____

Apologies _____

Topics

 Financial & Funding	25 min
 Talent & Hiring	20 min
 Product & Strategy	30 min
 Governance	10 min

Total allocated	85 min
Buffer	5 min

Q1 financial results bridge: 8% revenue ahead, EBITDA margin compressed 2.5 points (rebrand)

Talking points

- Revenue performance outpaced plan by 8%, demonstrating strong market traction
- EBITDA margin compression is driven by two one-off factors: rebrand costs and accelerated R&D hiring, not baseline business deterioration
- Path to margin recovery should be visible by Q3 as rebrand spend lapses and new engineers ramp productivity

Questions

- ? How much of the 2.5-point margin compression is permanent vs. temporary?
- ? What is the realistic timeline and margin target for return to pre-compression levels?
- ? How does this trajectory affect cash burn assumptions in our runway model?

Cash runway extended from 14 to 19 months (SAFE round closed March)

Talking points

- SAFE round closure in March extended our cash runway from 14 to 19 months
- Extended runway validates deferred Series B timeline and gives us room to deepen product-market fit
- Increased confidence in the financial trajectory removes near-term capital market pressure

Questions

- ? What revenue and burn-rate assumptions underpin the 19-month forecast?
- ? Are there realistic downside scenarios we should model that would shorten the runway?
- ? What milestones would strengthen our Series B positioning during this extended window?

Board acknowledgement of runway extension and Series B deferral (push to Q4)

Talking points

- Deferral from Q2 to Q4 2026 aligns capital raise with stronger product and market validation
- Additional 6 months allows us to scale revenue and reduce unit economics risk
- Deferred timeline reduces pressure on execution and allows disciplined hiring and market expansion

Questions

- ? Is the board comfortable with a Q4 Series B target?
- ? What conditions, if any, would trigger acceleration back to an earlier raise window?
- ? Are there board connections or market signals we should incorporate into Series B planning?

Engineering hiring: 12 of 15 planned hires landed; on track

Talking points

- Engineering recruitment execution is strong: 80% of target filled in H1
- Demand for engineering talent is competitive, but we are winning offers against strong competitors
- Remaining 3 positions are on a realistic path to fill by end of Q2

Questions

- ? What is the expected close date for the remaining 3 engineering offers?
- ? Are we seeing any slowdown in engineering retention as we scale?
- ? What is the confidence level on the engineering hiring plan for H2?

GTM hiring: 0 of 3 hires landed pending head of GTM start date

Talking points

- GTM hiring has stalled pending the arrival of the head of GTM, who will own the hiring and team building
- This is expected for a high-context leader role — hiring without leadership presence risks cultural and strategic misalignment
- Head of GTM is critical path; once they start, GTM hiring velocity should accelerate

Questions

- ? When does the head of GTM have an expected start date?
- ? What is the on-ramp plan to get them productive and hiring in their first 30 days?
- ? Are there interim GTM initiatives we should accelerate while waiting for leadership?

****Decision:** Board steer on GTM backfill options (delay hires until head of GTM onboarded vs**

Talking points

- Two approaches: (1) delay GTM hires until head of GTM is onboarded (slower, better long-term fit) or (2) backfill with contractors to maintain GTM motion (faster, execution risk if wrong context)
- Head of GTM hire is a lynchpin decision for team culture and strategy alignment
- Contractor option provides optionality but introduces integration risk if long-term hires later disagree on approach

Questions

- ? What is our risk appetite for contractor backfill vs. the execution risk of GTM team building delay?
- ? If we go contractor route, how do we mitigate the risk of philosophical misalignment with the incoming head of GTM?
- ? What is the revenue/market impact of 3-month GTM hiring delay vs. contractor-backfilled motion?

Roadmap prioritisation shift: design partner feedback surfaces workflow automation higher p

Talking points

- Design partner feedback from the programme shows stronger customer demand for workflow automation than analytics dashboard
- Swapping prioritisation aligns roadmap with customer signal and likely improves product-market fit velocity
- Analytics dashboard will still be built, but shifts to lower priority; no customer impact expected from the deferral

Questions

- ? How strong is the design partner consensus on workflow automation as higher priority?
- ? What is the competitive risk of deferring the analytics dashboard (do competitors have parity)?
- ? What is the effort estimate delta between the two features — is the swap purely a prioritisation or does it affect H2 throughput?

****Decision:**** EU market expansion timing – fast entry in H2 (stretches team) vs. delayed entry

Talking points

- Fast entry (H2 2026) expands addressable market and establishes early position, but requires heavy lift from existing team with limited bandwidth
- Delayed entry (H1 2027) allows hire of a dedicated country lead who can build regional go-to-market and team properly, but cedes 6 months of market time
- Risk asymmetry: fast entry risks team burnout and suboptimal market entry; delayed entry risks competitive positioning and revenue timing
- Cash runway extended to 19 months gives us strategic flexibility to absorb either timeline

Questions

- ? What is our competitive risk if we wait until H1 2027? (Are major competitors moving into EU in H2?)
- ? What is the realistic team capacity if we move fast in H2 — do we deprioritise product work or hiring?
- ? What does the country lead hire profile look like, and how long would recruitment take if we commit to delayed entry?

Minutes from last meeting

Talking points

- Review of prior meeting minutes establishes baseline for action item tracking
- Confirms decisions and commitments made at last meeting

Questions

- ? Are there any action items from the prior meeting that need board escalation or status update?
- ? Do any prior decisions require revisiting based on recent developments?

Conflicts of interest check

Talking points

- Standard governance requirement before discussion of strategic and financial decisions
- Ensures board independence and fiduciary duty clarity

Questions

- ? Does anyone have a conflict of interest with respect to today's agenda items?

☐		

Any other business

Talking points

- Open agenda for board-raised topics or emerging issues
- Ensures no critical items are missed

Questions

? Is there anything else the board wants to surface or discuss today?
